

PJ WX4152NI

Ultra-Short Throw Projector

ID: 432104

Showcase images from close distances in any direction

- WXGA Resolution (1280x800 dpi)
- Brightness rating of 3500 lumens
- Screen size up to 80"
- Use a digital pen to personalize your presentation with annotations

Bring information closer

Make a big impact in even the smallest room with the RICOH PJ WX4152NI Ultra Short Throw Projector. Use this ultra-short-throw projector to showcase images mere inches from the projection surface. Take advantage of 360-degree projection to present on any wall, floor or tabletop in offices, classrooms, public spaces and other venues.

Make your presentations more dynamic

You're not the only one with good ideas. Add annotations and highlight details on the projected surface via an incredibly accurate wireless digital pen. Because you can use LAN and wireless connections simultaneously, participants can even share documents or images directly from their laptops and personal mobile devices while you present.

Widescreen projection brings lifelike images to the screen

Connect to a wide range of audio-visual devices to project images, schematics, movies and more with 1280 x 800 WXGA wide format resolution at up to 80 inches diagonally. The PJ WX4152NI ultra short throw projector generates 3,500 lumens and contrast ratios up to 13,000:1, so every color — more than one billion of them — can be seen clearly in the brightest rooms. Colors are also adjusted automatically to offset the color of the projection surface.

360 degree projection turns ceilings and floors into screens

Share information anywhere. The PJ WX4152N offers 360-degree projection, so you can present on any wall in any room. In fact, you can even project images on the floor and tabletops for use in even the most unique training or promotional spaces.

Connect from your mobile device

Bring important information anywhere with the portable PJ WX4152NI. Save files to a USB or memory card and plug them in directly. You can also share information from your smartphone or tablet, and use the familiar swipe-scrolling and pinch-and-flick techniques to highlight specific details during your presentation. Pair the projector with Ricoh's Business Projection System to present in up to four different locations simultaneously. You can even let participants view the presentation via their personal mobile device.

Office use

It can easily be used in small-group office meetings.
Free from the disadvantages of conventional projectors.

An automatically networked projector lets you focus on your presentation

Don't let distractions be more memorable than your message. The PJ WX4152NI ultra short throw projector starts when it connects with your Macintosh® or Windows® computer, and it finds an available network automatically to avoid delays. It balances images and corrects keystone distortions on its own, too. Stay out of the way by using the handheld remote to navigate menus and access settings.

The smart choice for small spaces.

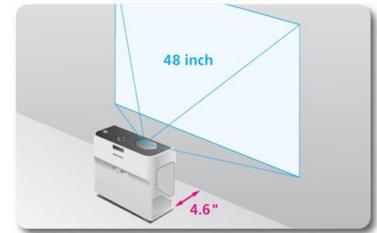

Take one look at Ricoh PJ WX4141 series projectors and it's easy to see why demand for ultra short throw models is so strong. Because the projectors can display large images at such close range, they can be used where most projectors can't: in tiny meeting rooms, in shop windows, even in museum displays. Best of all, they eliminate everything presenters don't like about desktop projectors, such as table clutter, lamp glare and on-screen shadows.

The optimum projector for modern working practices.

Ricoh PJ WX4141 series projectors take versatility and convenience to new heights. They combine all the benefits of a class-leading ultra short throw projector with a compact, lightweight design. Their easy portability and intuitive operation expand potential applications to include off-site presentations, as well as impromptu collaboration in open plan offices and small meeting rooms. More flexible and economical than expensive large format displays.

Simplify presentations from afar

Perform administrative tasks via Creston RoomView® and AMX NetLinx® software, even when you're not in the room. Use Ricoh's Web Image Monitor to access controls and adjust settings remotely. Program automatic shutdown when presenting continuously at trade shows or promotional events. Because it employs DLP projection technology, lamp life is 3,500 hours and can be extended to 5,000 hours in Eco Mode — without compromising quality.

A networked projector with wired or wireless options

Use both wired and wireless network sources simultaneously and share more types of information with your audience. Use the USB port to share images directly from a flash memory drive. Play movies — even those in 3D format — from DVDs and Blu-rays when you connect via the HDMI port.

Collaborative displays get your point across

Connect to your audience in more ways. Display images from up to four different computers onto a single screen to bring important information together. Take advantage of the Ricoh Smart Presenter app and invite iPad® users to view the presentation remotely. Or, you can pair it with Ricoh's Business Projection System to share the same presentation in up to four different locations.
